

Tree Maintenance and Removal

Tree Maintenance Guidelines

As our trees grow and mature, they need maintenance. Branches grow into walkways, over streets and sometimes die due to insects, disease, or natural processes of trees getting older. Not only does this look bad, but they can be a serious safety hazard that can destroy property or cause serious injury.

All dead, diseased, or obviously weakened trees or tree branches must be removed from your property. Tree branches must be at least 8 feet high over public walkways and 14 feet above streets.

If you see dead branches in any part of your tree, it may be time to call a qualified tree care professional, or do some pruning yourself. You are responsible for any trees and branches on your property, including trees from your property line to the curb of the street or the middle of any alley way. This does include the area between sidewalks and streets.

Cut Branches/Brush

Dispose of any cut or broken branches as soon as possible. Brush piles can often harbor insects and diseases that can spread to other trees in your neighborhood. They are a haven for rodents, snakes and spiders and are a fire hazard. For a nominal fee you can bring your brush to the Greeley Greencycle Center. The site is located one mile east of Highway 85 on East 8th Street.
