

Wastewater Utility Plan

In 2009 the City of Evans undertook the task of planning for the future of the wastewater collection and treatment system. The goals of the planning effort were to define the conditions of the existing infrastructure, evaluate growth trends and estimate future impact, describe improvements necessary to meet discharge permit requirements at the City's two wastewater treatment facilities, protect water resources, accommodate existing users and future growth, and develop a capital improvements plan and financial program that will ensure the goals of the utility are accomplished. This executive summary briefly describes the chapter contents, conclusions and recommendations arising from this document.
